# THE CLUSTER/ONE™ IS MORE THAN A NETWORK..........

It is a low-cost distributed data processing system which brings immediate solutions to real business problems:

- accounts payable/receivable
- financial planning
- sales tracking
- inventory control

- word processing
- electronic mail
- training
- branch office interconnects

All this is possible today with Nestar's personal computer-based network. Up to 65 Apple II's™ and Apple III's™ can be freely intermixed on a single network, and multiple networks, both local and remote, can be interconnected. Readily available applications software such as DB Master™ database management, the Messenger™ electronic mail, and Visicalc™ are fully integrated on the network.

Why pay for a minicomputer when you can get more function at half the cost with a *NESTAR CLUSTER/ONE SYSTEM*? Ask yourself and then call us at (415) 493-2223. Our sales people will be more than happy to answer your questions and help you configure a system for your particular application, considering both your hardware and software needs.

# NESTAR
